

Hangup Event

 This page is currently being written. Although the information below is probably accurate, it may not be complete or may have errors.

 The information on this page applies to **iSymphony 3.2+**.

 This event will only be fired for call segments related to extensions that are bound to licensed/full users, or was last bound (dialed or linked) to another call segment that is related to an extension that is bound to a licensed/full user.

Description

The hangup event signifies that a call has been hungup in the system. This event could be fired in response to someone explicitly hanging up the call, or the call being killed by the phone system. The event may or may not specify information about the extension and user related to the call.
