

# Determine Your iSymphony Version

On this page:

- [Client](#)
- [Server CLI](#)
- [FreePBX](#)

There are three different ways to find the current version of your iSymphony install.

## Client

Open your client and go to **Help->About**

## Server CLI

On your server command line do the following:

1. Type **telnet localhost 50001**
2. Type **version**
3. Type **exit**

## FreePBX

If using the FreePBX module the version and revision will be displayed at the top of the FreePBX iSymphony configuration page.
